nutrition without compromise

find the perfect nutrition at
the home of the range

NATURALLY 
HYPOALLERGENIC

we do not include wheat gluten, beef, soya, dairy products,
artificial colours, flavours or preservatives in any of our recipes.

Spring 2023

www.ardengrange.com

our story

We are a British pet food brand that has been a pioneer in pet nutrition for over 25 years. Built on our core philosophy of 'nutrition without compromise' all our dog and cat diets are based on no-nonsense, naturally hypoallergenic formulations. Our foods are gently digested and highly palatable with no added artificial flavours or sugar.

Our recipes contain exceptional ingredients, carefully sourced and included for their nutritional value. We combine these with powerful natural supplements to promote optimum health and wellbeing. It's our mission to fill every dog and cat bowl with goodness, in the UK and beyond.

our food

Naturally hypoallergenic

All Arden Grange dry food recipes are naturally hypoallergenic, meaning that we do not include wheat gluten, soya, dairy products, added sugar, artificial colours, flavours or preservatives.

Joint supplements

Joint supplements; chondroitin, glucosamine and MSM are included in all Arden Grange dry food recipes to help protect, maintain and support joint mobility and longevity.

Life stages

Our range of food caters for puppies and kittens through to senior dogs and cats.

Grain free

Arden Grange grain free foods have been specially developed to suit pets who suffer from an allergy or intolerance to cereal, grain, or gluten-based recipes. These recipes are also suitable for sensitive pets and include our superfood blend.

Sensitive products

Our range of Sensitive products provide pets that have particularly sensitive skin and digestion a grain free diet. They are available in white fish and venison recipes across all life stages and include our nutrient-rich superfood blend.

Carefully selected ingredients

All ingredients in our products are carefully selected for their nutritional value and quality. Each ingredient has a function and we formulate our recipes to ensure that they provide a balanced diet.

Naturally preserved

Arden Grange dry products are naturally preserved with tocopherols to stabilise the food, eliminating any chance of reactions to artificial preservatives.

Lifestyles

We have a range of diets for different lifestyles. Whether it's a working dog that needs extra calories, or a senior cat that needs to lose a little weight.

Complete diets

Our dog and cat food is complete, meaning it provides all the nutrition your pets need in one diet. No vitamin or mineral supplementation is necessary (unless directed by your vet).

ingredients within all our dry food recipes

A brief summary of some special ingredients we use and why we include them in our diets.

Glucosamine

Included in our recipes to offer joint aid and support, as it provides the building blocks to synthesise new joint cartilage.

Chondroitin

Can help block destructive enzymes that break down cartilage in joints and bones.

MSM

MSM (methyl-sulphonyl-methane) is a form of organic sulphur derived from pine bark, and its beneficial properties may include the relief of pain and inflammation. It is also thought that MSM may improve mental alertness and relieve stress.

Prebiotics FOS and MOS

All dry Arden Grange diets include prebiotics FOS and MOS to aid digestion. Prebiotics help promote a thriving colony of the good gut bacteria and this may limit the growth of pathogenic bacteria.

Omega-3 and Omega-6 fatty acids

Derived from krill and linseed, the correct ratio of these essential fatty acids is associated with benefits to the heart, digestion, skin and immune system. All Arden Grange dry foods contain sustainably sourced krill, a superior and outstandingly pure source of the omega-3 fatty acids EPA and DHA.

Nucleotides

Nucleotides play an important role in the metabolism of the body and may benefit both the digestive and immune systems.

Cranberries

Cranberries aid in maintaining oral and urinary tract health. They also have antioxidant properties and may be effective against certain bacteria and fungi.

Yucca extract

Yucca extract is derived from sap which has been extracted from the yucca schidigera cactus. All our diets are supplemented with yucca extract since it may help reduce faecal odour and reduce lawn staining.

Beet pulp

An excellent source of both soluble and insoluble fibre. Soluble fibre is used to produce short-chain fatty acids that supply energy to the friendly bowel flora. It delays gastric emptying, so there is more time for absorption, and improves peristalsis (the contractions that move the food along the digestive tract). Insoluble fibre ensures an optimal transit time of food within the intestine, dilutes the colonic contents, binds to toxins, and helps promote the right consistency of stool.

additional ingredients within our grain free recipes

Tapioca

Tapioca is derived from the cassava root. In conjunction with sweet potato, it helps to promote steady energy release. It is primarily composed of starch so is rarely allergenic and is a great source of nourishment for the friendly gut flora. With it being low in simple sugars and sodium, it is a healthy, novel carbohydrate source which is gluten free.

Peas

Peas are an incredibly nutritious low GI, low sodium ingredient that contain protein, fat, carbohydrate, and fibre. They are a good natural source of vitamins (including A, the B family, C and E) and minerals (including zinc, magnesium and potassium). Peas also contain lutein and zeaxanthin which are powerful antioxidants that are important for healthy vision.

Pumpkin

Pumpkin is an easily digested, wholesome ingredient which is protein-rich (due to the seeds). It contains the amino acids methionine and cysteine which are important for heart, liver and skin health, as well as iron, zinc and magnesium. Pumpkin is a source of carotene and tocopherols, and it can enhance the activity of other antioxidants.

our superfood blends

Our special superfood blends of fruit and plant extracts include nutrient-rich ingredients that have been selected for their excellent antioxidant properties, and will provide much needed support to dogs' immune systems and overall health and wellbeing.

The benefits of adding superfoods to our diets are increasingly gaining recognition. Rich in certain compounds, these foods hold powerful potential to boost our health and that of our pets.

ingredients within our superfood blends

Black pepper

A substance called piperine, which is present in black pepper, increases the bioavailability of curcumin. It does so by inhibiting the metabolic breakdown of turmeric compounds in the gut and liver, allowing them to remain in the body for longer so that they have more time to work.

Curcumin

Curcumin is a compound found in the turmeric spice, which has anti-inflammatory and antiseptic properties. It can also increase the amount of antioxidants produced by the body to help protect against free radicals (unstable atoms that can cause damage to the cells resulting in premature ageing and an increased susceptibility to illness).

Citrus extracts

A complex blend of citrus extracts helps maintain a healthy microbiome and enhance immune response via their anti-inflammatory and antioxidant properties.

Dried fruit extract

A variety of concentrated dried fruit extracts are included for their antioxidant properties. Diversity is important because antioxidants in food are not interchangeable, and many differ in both their site of action and mechanism. The Arden Grange recipes have always included cranberries, but in our Sensitive range of foods, these are now accompanied by (in descending order of inclusion): elderberries, rosehips, blackcurrants, blackberries, blueberries and raspberries. These healthy fruits are also a very good natural source of vitamin C which is needed for the growth, development and repair of the body's tissues.

Coconut oil

Coconut oil has many benefits since it contains a diverse array of antioxidants to help keep damaging free radicals in check. It is a source of lauric acid which has anti-inflammatory, anti-fungal, anti-bacterial and anti-viral properties, as well as medium chain triglycerides that are beneficial to the gut and brain. It is a pure, cold-pressed source to help retain nutrient values.

Chia seeds

Chia seeds are the richest plant source of omega-3 fatty acids which have many benefits due to their anti-inflammatory properties. They contain many antioxidants and have hypoglycaemic, antimicrobial and immunostimulatory effects. Ayurvedic medicine (a form of holistic medicine from the Indian subcontinent) suggests chia seeds nourish the blood & promote digestive regularity thanks to their ability to absorb water in the gastrointestinal tract, forming a gel-like substance, as well as reduce inflammation, promote kidney health and support proper hydration.

Spirulina

Spirulina is a type of algae that contains beta carotene, vitamins B1, 2 and 3, iron and omega-6 GLA (gamma-linolenic acid). It is a rich source of phycocyanin - a pigment that promotes blood cell regeneration, improves lymphocyte activity and boosts the lymphatic system to improve immune function/enhance disease resistance. This versatile ingredient is also a very good source of detoxifying chlorophyll.

Dark-skinned fruits & berries

A variety of concentrated dried fruit extracts are included for their antioxidant properties; comprising cranberry, pomegranate, blueberry, mulberry, lingonberry and rosehip, all of which help to keep free radicals in check. A diverse selection of ingredients is included because antioxidants are not interchangeable, and many differ in both their site of action and mechanism. Their unique chemical behaviours and biological properties mean that one substance cannot do all of the work alone. The body produces its own antioxidants, but many of those found in plants cannot be manufactured.

changing to Arden Grange

For a successful diet change, we recommend following the feeding pattern below. The daily feeding volume may be split into two feeds or more (our dry dog and cat food may be fed dry or with warm water added). A longer or shorter introductory period may be undertaken if necessary.

day 1-2	day 3-4	day 5-6	day 7
75% original diet	50% original diet	25% original diet	
25% Arden Grange	50% Arden Grange	75% Arden Grange	100% Arden Grange

recommended feeding charts

feeding guide

weight (kg)	1-3	3-5	5-10	10-15	15-20	20-25	25-30	30-35
gms / day	25-55	55-85	85-140	140-190	190-235	235-275	275-315	315-355

Using the feeding charts

The Arden Grange feeding charts shown on each product page will give an estimation of the daily feeding quantity based on your dog or cat's weight. However, it is important to remember that these figures are guidelines only, and there are several factors to be taken into account when assessing your pet's nutritional requirements:

Activity level – Working dogs and those with high activity levels require more calories for energy than those leading a less active lifestyle.

Temperament – Stressed animals burn off more calories than relaxed ones.

Metabolism – Every animal is an individual with his or her own speed of metabolism; this means that two dogs of the same age, breed and weight could have different daily calorie requirements.

In order to provide the correct portions, it is also helpful to assess your pet's appetite, visual appearance and stools. Whilst poo watching does not sound particularly pleasant, it is one of the best indicators of health. Increased frequency of passing faeces, production of large quantities of stools or loose motions are often frequent signs that an animal is receiving more food than he or she requires. It is important to obtain an accurate weight for your dog or cat, and also to weigh out the food. Guessing on both accounts gives a large margin of error.

If you require any assistance in calculating the correct feeding quantities for your dog or cat, please contact our nutrition adviser who will be happy to help.

Always ensure fresh, clean drinking water is available to your dog or cat

life stage food choices

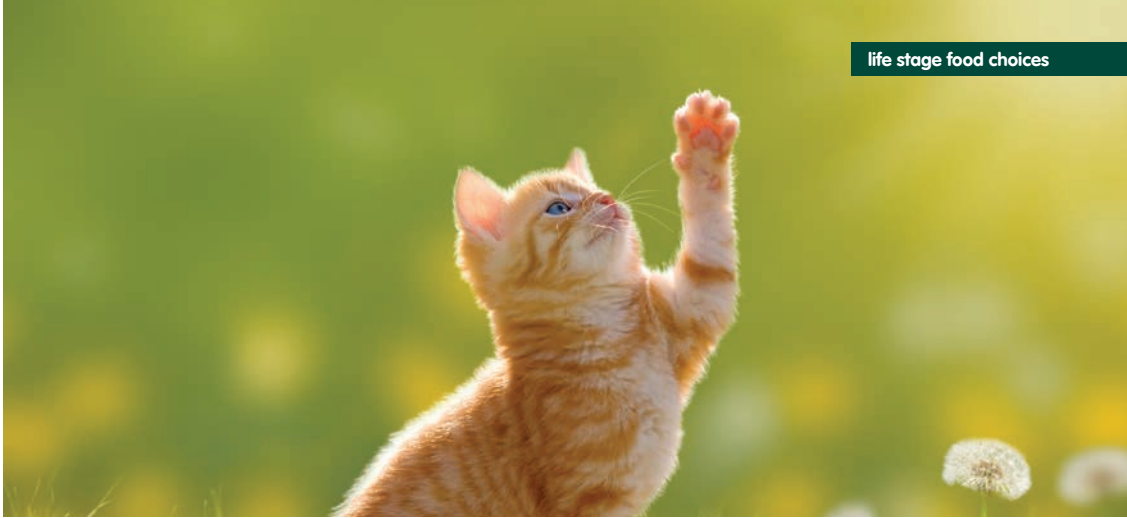

Changing your puppy's diet to adult food

As a general guide we suggest a change to adult food when your puppy has reached his or her full adult height. Different sizes and breeds grow at varying rates and therefore there is not a specific time applicable to all dogs to change to adult dog food.

When to swap to senior food

We recommend changing to one of our senior diets when you notice your dog showing signs of ageing (e.g. stiffness, slowing down, weight gain). Dogs age at different rates, but vets generally suggest that around 8 years of age is the ideal time to consider a senior diet.

Small Breed	3-12 weeks	3-6 months	6 months +
e.g. Toy Poodle, Yorkshire Terrier	Weaning / Puppy	Weaning / Puppy or Puppy Junior	Adult
Medium Breed	3-8 weeks	2-9 months	9 months +
e.g. Cocker Spaniel, Border Collie	Weaning / Puppy	Puppy / Junior	Adult
Large Breed	3-8 weeks	2-12 months	12 months +
e.g. Labrador, German Shepherd	Weaning / Puppy	Puppy / Junior Large Breed	Adult
Giant Breed	3-8 weeks	2-18 months	18 months +
e.g. St Bernard, Great Dane	Weaning / Puppy	Puppy / Junior Large Breed	Adult

Cats

Kittens need to increase their birth weight forty-fiftyfold by maturity, and extra calories are needed to achieve this. Arden Grange kitten food is a delicious, energy-dense diet ideally suited to this purpose, and can be fed during the weaning process until adulthood.

Our adult, sensitive and light diets can be fed from 12 months.

The light diet is particularly good for senior cats, due to their tendency to be less active, as it is lower in calories than our adult diets.

how to feed wet and dry dog food together

Our wet and dry food can be fed independently, however there are some benefits to feeding a combination of the two.

Benefits of feeding wet and dry food

- The wet food is highly palatable so it can help to encourage an inappetent dog to eat.
- Due to the high moisture level in the wet food, feeding a combination of wet and dry can help increase fluid intake.
- The wet food is lower in calories than Arden Grange dry food. By feeding both the wet and dry food to a dieting or hungry dog, a higher volume of food can be given, with fewer calories compared to the same volume of dry food.

Recommended quantities for each lifecycle

Feeding our dry diets with Partners Chicken or Partners Lamb wet food

puppies: can be fed in small quantities as a “topper” providing at least two thirds of the puppy’s daily calories are derived from one of Arden Grange’s dry puppy growth diets. Follow the guide for the dry food, but reduce it by 35g for every quarter of a can of Partners added.

adult dogs: can be fed at any proportion with Arden Grange. Follow the guide for the dry, but reduce it by 35g for every quarter of a can of Partners added.

dieting dogs: can be fed at any proportion with Arden Grange Light diet. Follow the guide for the dry food, but reduce it by 40g for every quarter of a can of Partners added.

Feeding our dry diets with Partners Sensitive wet food

puppies: can be fed in small quantities as a “topper” providing at least two thirds of the puppy’s daily calories are derived from one of Arden Grange’s dry puppy growth diets. Follow the guide for the dry food, but reduce it by 20g for every quarter of a can of Partners added.

adult dogs: can be fed at any proportion with Arden Grange dry recipes. Follow the guide for the dry food, but reduce it by 20g for every quarter of a can of Partners added.

dieting dogs: can be fed at any proportion with Arden Grange Light diet. Follow the guide for the dry food, but reduce this by 25g for every quarter of a can of Partners added.

treats and training aids

healthy rewards

tasty liver treat for dogs and cats

Tasty Liver Treat is a highly palatable paste which is a perfect reward or training aid for adult dogs and cats. It is also a great way of giving medication, either mixed in with a crushed tablet or with liquid medications on a dish, and is an excellent aid when grooming.

- ✓ Grain free and highly palatable
- ✓ Ideal for administering tablets
- ✓ Can be used as a training aid to encourage recall
- ✓ May also be fed to puppies and kittens

ingredients

Analytical Constituents: Crude Protein 13%, Crude Fat 30.6%, Crude Fibre 1.0%, Crude Ash 1.4%, Moisture 50.0%.

performance - with fresh chicken & rice

This recipe benefits from a higher level of chicken oil as the primary fat source, compared to our standard diets, promoting optimal skin and coat condition as well as ensuring sustained energy levels. In addition, the diet contains boosted levels of glucosamine, chondroitin and MSM to help protect the joints of working dogs.

- ✓ Specially-formulated for very active or working dogs
- ✓ Contains natural antioxidants to inhibit the formulation of destructive free radicals, released during stress or strenuous exercise

ingredients

Analytical Constituents: Crude Protein 25%, Crude Fat 18%, Crude Ash 6.5%, Crude Fibre 2.4%, Calcium 1.5%, Phosphorus 1%, Omega-3 0.53%, Omega-6 3.71%.

Composition: Chicken 31% (chicken meat meal 26%, fresh chicken 5%), rice (26%), maize, refined chicken oil, beet pulp, chicken digest, whole dried egg, yeast, krill, fish meal, whole linseed, minerals, prebiotic FOS, prebiotic MOS, glucosamine (370mg/kg), MSM (370mg/kg), chondroitin (260mg/kg), yucca extract, cranberries, green tea extract (100mg/kg), quercetin (100mg/kg), nucleotides.

Nutritional Additives (per kg): Vitamins: Vitamin A 24,000 IU, Vitamin D3 1,800 IU, Vitamin E 750 IU, L-Carnitine 50mg, Taurine 1000mg/kg.

Trace Elements: Zinc (as zinc chelate of amino acid hydrate) 120mg, Copper (II) (as copper chelate of amino acid hydrate) 10.7mg, Manganese (as manganese chelate of amino acid hydrate) 8mg, Iodine (as calcium iodate anhydrous) 2mg.

Antioxidant: Natural mixed tocopherols.

prestige - rich in fresh chicken

Arden Grange Prestige Rich in Fresh Chicken is a concentrated recipe designed to fulfil the nutritional needs of dogs with higher requirements for calories or smaller feeding portions, whether a much-loved family pet, or a working or show dog. The higher protein and fat levels promote excellent condition in a highly digestible form, which is particularly suitable for pregnant or lactating bitches and convalescing dogs. This extremely palatable diet is also suitable for the fussiest eater.

- ✓ Concentrated recipe, great for higher calorie requirements or when feeding small portions
- ✓ High protein and fat levels
- ✓ Ideal for lactating bitches and convalescing dogs

ingredients

Analytical Constituents: Crude Protein 30%, Crude Fat 21%, Crude Ash 7%, Crude Fibre 3%, Calcium 1.5%, Phosphorus 1%, Omega-3 1.10%, Omega-6 4.85%.

light - with fresh chicken & rice

Arden Grange Light with Fresh Chicken & Rice is lower in protein and oil than our standard adult range. With fewer calories, it can aid in weight reduction and the treatment of obesity. The addition of L-Carnitine may help to increase the conversion of fat to energy and helps maintain lean body mass. Yucca extract is also included, since its antioxidant properties can help to combat the effects of free radicals from which obese animals are more at risk.

- ✓ Fewer calories than our standard adult diets
- ✓ Can aid in weight reduction and the treatment of obesity
- ✓ Contains L-Carnitine to help increase the conversion of fat to energy and to maintain lean body mass

ingredients

Analytical Constituents: Crude Protein 18%, Crude Fat 7.5%, Crude Ash 7%, Crude Fibre 3.5%, Calcium 1.2%, Phosphorus 0.8%, Omega-3 0.42%, Omega-6 2.10%.

Composition: Rice (31%), maize (27%), chicken 19% (chicken meat meal 14%, fresh chicken 5%), beet pulp, chicken digest, refined chicken oil, yeast, krill, whole dried egg, whole linseed, minerals, prebiotic FOS, prebiotic MOS, yucca extract, glucosamine, MSM, chondroitin, cranberries, nucleotides.

Nutritional Additives (per kg): Vitamins: Vitamin A 18,000 IU, Vitamin D3 1,350 IU, Vitamin E 240 IU, L-Carnitine 50mg.

Trace Elements: Zinc (as zinc chelate of amino acid hydrate) 90mg, Copper (II) (as copper chelate of amino acid hydrate) 8mg, Manganese (as manganese chelate of amino acid hydrate) 6mg, Iodine (as calcium iodate anhydrous) 1.5mg.

Antioxidant: Natural mixed tocopherols.
