

ARDEN GRANGE™

nutrition without compromise

product guide

naturally hypoallergenic dog and cat foods

NATURALLY 
HYPOALLERGENIC

we do not include wheat gluten, beef, soya, dairy products,
artificial colours, flavours or preservatives in any of our recipes

www.ardengrange.com

our story

We are an independent, family run British company that have been producing super premium pet food for over 20 years. Our founders' extensive knowledge and expertise from the dog showing world, combined with their passion and desire to provide superior pet nutrition led to the creation of Arden Grange in 1996.

We continue to make pet food diets which provide optimum nutrition. Our founding principle is to provide 'nutrition without compromise'.

our story

Naturally hypoallergenic

All Arden Grange products are naturally hypoallergenic, meaning that our recipes don't include wheat gluten, soya, beef, dairy products, artificial colours, flavours or preservatives.

Carefully selected ingredients

All ingredients in our products are carefully selected for their nutritional value and quality. Each ingredient has a function and we formulate our recipes to ensure that they provide a balanced diet.

Joint supplements

Joint supplements; chondroitin, glucosamine and MSM are included in all Arden Grange dry food recipes to help protect, maintain and support joint mobility and longevity.

Naturally preserved

Arden Grange dry products are naturally preserved with tocopherols to stabilise the food, eliminating any chance of reactions to artificial preservatives or additives.

Lifestages

Our range of food caters for puppies and kittens through to senior dogs and cats.

Lifestyles

We have a range of diets for different lifestyles. Whether it's a working dog that needs extra calories, or a senior cat that needs to lose a little weight.

Sensitive - grain free recipe products

Our range of Sensitive products provide animals that have particularly sensitive skin and digestion a grain free diet which comprises ocean white fish and potato. Ocean white fish provides a protein source that is easily metabolised for efficient bodily functioning.

Complete diets

All of our diets are complete, meaning that they provide all the nutrition your pets need in one diet. There is no need to supplement our diets.

ingredients

A brief summary of some special ingredients we use and why we include them in our diets.

Glucosamine

Included in a large variety of our recipes to offer joint aid and support, as it provides the building blocks to synthesise new joint cartilage.

Beet pulp

An excellent source of both soluble and insoluble fibre. Soluble fibre is used for the production of short-chain fatty acids (which supply energy to the friendly bowel flora). It delays gastric emptying.

Omega-3 and Omega-6 fatty acids

Derived from krill and linseed, the correct ratio of these essential fatty acids is associated with benefits to the heart, digestion, skin and immune system. All Arden Grange dry foods contain krill, a superior and outstandingly pure source of the omega-3 fatty acids EPA and DHA.

Nucleotides

Nucleotides play an important role in the metabolism of the body and may benefit both the digestive and immune systems.

Yucca extract

Yucca extract is derived from sap which has been extracted from the yucca schidigera cactus. All our dry diets are supplemented with yucca extract since it may help reduce faecal odour and reduce lawn staining.

ingredients

Chondroitin

Can help block destructive enzymes that break down cartilage in joints and bones.

MSM

MSM (methyl-sulphonyl-methane) is a form of organic sulphur derived from pine bark, and its beneficial properties may include the relief of pain and inflammation. It is also thought that MSM may improve mental alertness and relieve stress.

Prebiotics FOS and MOS

All dry Arden Grange diets include prebiotics FOS and MOS to aid digestion. Prebiotic FOS helps promote a thriving colony of the good gut bacteria and this may limit the growth of pathogenic bacteria.

Cranberries

Cranberries aid in maintaining urinary tract health. They also have antioxidant properties and may be effective against certain bacteria and fungi.

+ SUPERFOOD BLEND

Fruit and plant extracts to help support the immune system

Our special Superfood blend of fruit and plant extracts is included within all our dry Sensitive dog diets. These nutrient-rich ingredients have been selected for their excellent antioxidant properties and will provide much needed support to dogs' immune systems and overall health and wellbeing.

Superfoods

Superfoods do not have a formal scientific or legal definition, but they are increasingly gaining wider recognition as foods that are rich in certain compounds, such as antioxidants, that may have benefits to our health and to those of our pets.

Black pepper

A substance called piperine, which is present in black pepper, increases the bioavailability of curcumin. It does so by inhibiting the metabolic breakdown of turmeric compounds in the gut and liver, allowing them to remain in the body for longer so that they have more time to work.

Citrus extracts

A complex blend of citrus extracts helps maintain a healthy microbiome and enhance immune response via their anti-inflammatory and antioxidant properties.

Curcumin

Curcumin is a compound found in the turmeric spice, which has anti-inflammatory and antiseptic properties. It can also increase the amount of antioxidants produced by the body to help protect against free radicals (unstable atoms that can cause damage to the cells resulting in premature aging and an increased susceptibility to illness).

Dried fruit extracts

A variety of concentrated dried fruit extracts are included for their antioxidant properties. Diversity is important because antioxidants in food are not interchangeable, and many differ in both their site of action and mechanism. The Arden Grange recipes have always included cranberries, but in our Sensitive range of foods, these are now accompanied by (in descending order of inclusion): elderberries, rosehips, blackcurrants, blackberries, blueberries and raspberries. These healthy fruits are also a very good natural source of vitamin C which is needed for the growth, development and repair of the body's tissues.

changing to Arden Grange

For a successful diet change, we recommend following the feeding pattern below. The daily feeding volume may be split into two feeds or more (our dry cat food may be fed dry or with warm water added). The proportions of Arden Grange should be increased over the first week.

day 1-2	day 3-4	day 5-6	day 7
75% original diet	50% original diet	25% original diet	
25% Arden Grange	50% Arden Grange	75% Arden Grange	100% Arden Grange

recommended feeding charts

feeding guide

weight (kg)	1-3	3-5	5-10	10-15	15-20	20-25	25-30	30-35
grams / day	25-55	55-85	85-140	140-190	190-235	235-275	275-315	315-355

Using the feeding charts

The Arden Grange feeding charts shown on each product page will give an estimation of the daily feeding quantity based on your dog or cat's weight. However, it is important to remember that these figures are guidelines only, and there are several factors to be taken into account when assessing your pet's nutritional requirements:

Activity level – Working dogs and those with high activity levels require more calories for energy than those leading a less active lifestyle.

Temperament – Stressed animals burn off more calories than relaxed ones.

Metabolism – Every animal is an individual with his or her own speed of metabolism; this means that two dogs of the same age, breed and weight could have different daily calorie requirements.

In order to provide the correct portions, it is also helpful to assess your pet's appetite, visual appearance and stools. Whilst poo watching does not sound particularly pleasant, it is one of the best indicators of health. Increased frequency of passing faeces, production of large quantities of stools or loose motions are often frequent signs that an animal is receiving more food than he or she requires. It is important to obtain an accurate weight for your dog or cat, and also to weigh out the food. Guessing on both accounts gives a large margin of error.

If you require any assistance in calculating the correct feeding quantities for your dog or cat, please contact our nutrition adviser who will be happy to help.

← Always ensure fresh, clean drinking water is available to your dog or cat

lifestage food choices

Changing your puppy's diet to adult food

As a general rule we recommend that your dog continues on puppy food until it reaches its full adult height. Different sizes and breeds of dog grow at varying rates and therefore there is not a specific time applicable to all dogs to change to adult dog food.

When to swap to senior food

We recommend that a switch to our senior food happens when you notice your dog slowing down. Similarly, dogs are all different and will change at different rates.

lifestage food choices

Small Breed	3-12 weeks	3-6 months	6 months +
e.g. Toy Poodle, Yorkshire Terrier	Weaning / Puppy	Weaning / Puppy or Puppy Junior	Adult
Medium Breed	3-8 weeks	2-9 months	9 months +
e.g. Cocker Spaniel, Border Collie	Weaning / Puppy	Puppy / Junior	Adult
Large Breed	3-8 weeks	2-12 months	12 months +
e.g. Labrador, German Shepherd	Weaning / Puppy	Puppy / Junior Large Breed	Adult
Giant Breed	3-8 weeks	2-18 months	18 months +
e.g. St Bernard, Great Dane	Weaning / Puppy	Puppy / Junior Large Breed	Adult

Cats

Kittens need to increase their birth weight forty-fiftyfold by maturity, and extra calories are needed to achieve this. Arden Grange kitten food is a delicious, energy-dense diet ideally suited to this purpose, and can be fed during the weaning process until adulthood.

Our adult, sensitive and light diets can be fed from 12 months.

The light diet is particularly good for senior cats as it is lower in calories per gram than our 'adult' diets for those cats that are less active.

how to feed wet and dry dog food together

Our range of wet and dry food can be fed independently, however there are some benefits to feeding a combination of the two.

Benefits of feeding wet and dry food

- The wet food is highly palatable so it can help to encourage an inappetent dog to eat.
- Due to the high moisture level in the wet food, feeding a combination of wet and dry can help increase fluid intake.
- The wet food is lower in calories per gram than Arden Grange dry food. By feeding both the wet and dry food to a dieting or hungry dog, a higher volume of food can be given, with fewer calories compared to the same volume of dry food.

Recommended quantities for each lifestage

Feeding our dry diets with Partners chicken or Partners lamb wet food

puppies: can be fed in small quantities as a “topper” providing at least two thirds of the puppy’s daily calories are derived from Arden Grange Puppy Junior or Puppy Junior Large Breed dry growth diets. prestige - rich in fresh chicken

Arden Grange prestige rich in fresh chicken is a concentrated recipe designed to fulfil the nutritional needs of dogs with higher requirements for calories or smaller feeding portions, whether a much-loved family pet, or a working or show dog. The higher protein and fat levels promote excellent condition in a highly digestible form, which is particularly suitable for pregnant or lactating bitches and convalescing dogs. This extremely palatable diet is also suitable for the fussiest eater.

- ✓ Concentrated recipe, great for higher calorie requirements or when feeding small portions.
- ✓ High protein and fat levels.
- ✓ Ideal for lactating bitches and convalescing dogs.

light - with fresh chicken & rice

Arden Grange light with fresh chicken & rice is lower in protein and oil than our standard adult range. With fewer calories, it can aid in weight reduction and the treatment of obesity. The addition of L-carnitine may help to increase the conversion of fat to energy and helps maintain lean body mass. Yucca extract is also included, since its antioxidant properties can help to combat the effects of free radicals from which obese animals are more at risk.

- ✓ Fewer calories than our standard adult diets.
- ✓ Can aid in weight reduction and the treatment of obesity.
- ✓ L-carnitine to help increase the conversion of fat to energy and to maintain lean body mass.

ingredients

Analytical Constituents: Crude Protein 18%, Fat Content 7.5%, Crude Ash 7%, Crude Fibres 3.5%, Calcium 1.2%, Phosphorus 0.8%, Omega-3 0.42%, Omega-6 2.10%, L-carnitine 50mg/kg
